3. The loss of about ten days' production resulted from the stoppage which began on 17 June 1953. Three hundred workers from various sections of the plant who went on strike during the 17th and 18th were still absent at the end of the month. The supply of brown coal briquettes to the steelplant generators could not be maintained. As a result, two of the open hearth furnaces were allowed to cool, and the linings fell in. The linings of most of the annealing furnaces in the rolling mill were similarly damaged, and these were still out of action at the end of June.

Comment: "Special building projects" are those in progress, on behalf of the Russians, in the Torgelow and Rusgen districts.
